

INTISARI

Kontribusi alumni terhadap institusi Pendidikan sangatlah penting baik itu untuk evaluasi penyelenggaraan kurikulum pembelajaran, informasi lowongan pekerjaan serta proses akreditasi. Oleh karena itu perlu adanya penelusuran terkait data alumni. Aktivitas mengumpulkan informasi alumni dikenal sebagai tracer study alumni. Prodi Informatika Universitas Amikom Purwokerto memiliki banyak alumni namun ketika diminta mengisi tracer study yang mengisi sangat sedikit sehingga ada potensi kurangnya kecintaan alumni terhadap kampus asalnya hal ini dikarenakan belum adanya badan atau wadah yang mewadahi informasi mengenai alumni serta proses tracer study saat ini masih menggunakan google form dan belum terintegrasi dengan website. Selain itu pada website Prodi Informatika belum ada informasi mengenai mahasiswa dan aluminya. Tujuan penelitian ini adalah menambahkan tracer study pada website informatika dengan memanfaatkan plugin wordpress. Program dibuat menggunakan wordpress dan Xampp serta database MySQL. Metode pengembangan sistemnya menggunakan waterfall dan perancangannya menggunakan UML. Hasil penelitiannya yaitu website tracer study berbasis wordpress yang dapat membantu proses pengumpulan data alumni serta berisikan informasi mengenai alumni berupa daftar alumni, galeri alumni, dan berita alumni.

Kata kunci: Tracer study, website, Alumni, wordpress

ABSTRACT

Alumni contributions to educational institutions are very important, both for evaluating the implementation of the learning curriculum, job vacancy information, and the accreditation process. Therefore, it is necessary to trace alumni data. The activity of collecting alumni information is known as an alumni tracer study. The informatics study program at Amikom University Purwokerto has many alumni, but when asked to fill out a tracer study, very few fill it out so that there is a potential for a lack of alumni love for their home campus. This is because there is no body or forum that accommodates information about alumni, and the current tracer study process still uses Google Form and has not been integrated with the website. In addition, there is no information about students and alumni on the informatics study program website. The purpose of this study is to add a tracer study to the informatics website by utilizing the WordPress plugin. The program is created using WordPress, XAMPP, and a MySQL database. The system development method uses a waterfall, and its design uses UML. The results of the study are a WordPress-based tracer study website that can help the process of collecting alumni data and contains information about alumni in the form of alumni lists, alumni galleries, and alumni news.
