

## **INTISARI**

Dalam kegiatan perawatan peralatan komputer dan kelistrikan gedung Universitas Amikom Purwokerto, UPT PLT membutuhkan persediaan alat dan barang untuk menunjang keberlangsungan kegiatannya agar proses perawatan berjalan dengan baik dan cepat. Untuk menghindari terjadinya kesalahan pencatatan persediaan alat dan barang yang ada di gudang UPT PLT maka dibuatkan sebuah sistem berbasis website untuk memonitoring persediaan alat dan barang. Peneliti menggunakan framework codeigniter 4 dalam proses perancangan website ini. Penelitian ini telah berhasil membangun sistem informasi monitoring persediaan alat dan barang berbasis website untuk memudahkan karyawan UPT PLT Universitas Amikom Purwokerto dalam memonitoring persediaan alat dan barang.

Kata kunci : persediaan, framework codeigniter, website, monitoring.

## **ABSTRACT**

*In the maintenance of computer equipment and electrical equipment building of Amikom Purwokerto University, UPT PLT requires a supply of tools and goods to support the continuity of its activities so that the maintenance process runs well and quickly. To avoid errors recording the inventory of tools and goods in the UPT PLT warehouse, a website-based system was created to monitor the inventory of tools and goods. Researchers use codeigniter 4 framework in the process of designing this website. This research has succeeded in building a website-based inventory monitoring information system of tools and goods to facilitate UPT PLT employees of Amikom Purwokerto University in monitoring the inventory of tools and goods.*

*Keywords: inventory, codeigniter framework, website, monitoring*
